

$$|\alpha - \beta| \leq \frac{\sqrt{\Delta}}{\gamma} = \frac{\sqrt{m^2 + 4m - 4m}}{\gamma} = \frac{\sqrt{(m-2)^2}}{\gamma} = \frac{|m-2|}{\gamma} \rightarrow \text{مطلوبه} \quad -5$$

$m \rightarrow$  شرط اول، شرط دوم  $\frac{|m(m-2)|}{\gamma} = \frac{1}{\gamma} \rightarrow m(m-2) \leq \gamma \rightarrow m^2 - 2m - \gamma \leq 0$   
 $m = 2, m = -1 \quad y = x^2 - m\alpha + 1 \rightarrow x_2 = \frac{m}{\gamma} = \frac{2}{\gamma} \text{ و } \frac{-1}{\gamma}$   
 $m(m-2) = -3$   
 $m^2 - 2m + 3 = 0$

$$y_{min} = \frac{-\Delta}{4a} = \frac{-9 + 4a^2}{4a} = \frac{1}{\alpha} \rightarrow 4\gamma a^2 - 4\gamma a - 4\gamma \leq 0$$

$$a^2 - a - 1 \leq 0$$

$$(a-2)(a+2) \leq 0$$

$a \leq 2$  غیرتوجیهی چون  $a$  باید مثبت باشد  
 پس  $min$  باشد  $a \leq 2$

$$\frac{\sqrt{\Delta}}{|a|} \leq 2 \rightarrow \frac{\sqrt{a^2 + 4a - 4a}}{1} = \sqrt{(a-1)^2} = |a-1| \leq 2 \rightarrow a \leq 3, a \geq -1$$

$$\rightarrow x^2 - 4x + 3 \leq 0 \rightarrow x \leq 1, x \geq 3$$

غیرتوجیهی  
چون  $a$  باید مثبت باشد

$$x^2 - 1 \cdot x + b \leq 0 \rightarrow \frac{\sqrt{\Delta}}{1} \leq 2 \rightarrow \sqrt{1 - 4b} \leq 2 \rightarrow 1 - 4b \leq 4 \rightarrow b \geq -3/4$$

$$x^2 - 1 \cdot x + 2 \leq 0 \rightarrow x \leq 2, x \geq 4$$

$$4 \times 2 - 2 \times 1 = 6$$

$$y = -ax^2 + ax + 2 \rightarrow S(\frac{1}{4}, \frac{a}{4} + 2)$$

$$y = 2bx^2 - bx - 1 \rightarrow S(\frac{1}{4}, -\frac{b}{4} - 1)$$

$$2b \times \frac{1}{4} - b(\frac{1}{4}) - 1 = \frac{a}{4} + 2 \rightarrow \frac{a}{4} = -2 \rightarrow a = -8$$

$$\frac{-a}{4} + \frac{a}{4} + 2 = -\frac{b}{4} - 1 \rightarrow -\frac{b}{4} = \frac{12}{4} \rightarrow b = -12$$

$$b - a = -12 - (-8) = -4$$

$$\alpha + \beta = \frac{-f}{2a} \quad \alpha\beta = \frac{b}{2a} \rightarrow 2\omega \times \beta = \beta \rightarrow \alpha = \frac{1}{\omega}$$

$$\alpha = \frac{1}{\omega} \rightarrow \frac{1}{\omega} + \beta = \frac{-f}{2a} \rightarrow \beta = -1 \rightarrow \beta < \alpha$$

غیرتوجیهی

$$\alpha = \frac{1}{\omega} \rightarrow \frac{1}{\omega} + \beta = \frac{f}{2a} \rightarrow \beta = 1 \checkmark$$

$$x_2 = \frac{-f}{2a} = \frac{2}{\omega} \quad y_2 = \frac{-\Delta}{4a} = \frac{9}{\omega}$$

دو جواب دارد

$$\alpha + b = a^2 + b^2 - 1 \quad \alpha + b - 1 = ab \rightarrow ab \leq \alpha + b - 1$$

$$\alpha + b = ((\alpha + b)^2 - 2(\alpha + b - 1)) - 1 \quad \alpha + b \leq 8$$

$$8 = 8^2 - 2S - 1 \rightarrow 8^2 - 2S - 1 = 0 \rightarrow (8-\omega)(8+\omega) = 0 \rightarrow 8 = \omega$$

$$a + b = 8$$

غیرتوجیهی چون  $a, b$  باید مثبت اند
