

الف) $a > 0$ $\Delta = 4 - 0 > 0$ $S = \frac{2}{4} = \frac{1}{2} > 0$ $P = 0$  از نایبی دوم نمی گذرد

ب) $a < 0$ $\Delta = 16 - 0 > 0$ $S = \frac{-4}{-2} = 2 > 0$ $P = 1 > 0$  از نایبی دوم نمی گذرد

الف) $a > 0$ $\Delta = 25 - 16 = 9 > 0$ $S = \frac{5}{4} > 0$ $P = 1 > 0$  اول و دوم و چهارم

ب) $a < 0$ $\Delta = 16 + 4 > 0$ $S = \frac{-4}{-2} = 2 > 0$ $P = 1 > 0$  اول و سوم و چهارم

الف) $\frac{a+B}{a-B} = \frac{S}{a-B} = \frac{1}{\sqrt{13}} = \frac{\sqrt{13}}{13}$ $a-B = \frac{\sqrt{\Delta}}{|a|} = \sqrt{13}$ $P = -3$

ب) $a^2 + B^2 = (a+B)^2 - 2aB = S^2 - 2P = 1 + 6 = 7$ $S = 1$

ج) $a^2 + B^2 = (a+B)^3 - 2aB(a+B) = S^2 - 2PS = 1 + 9 = 10$

د) $a^2 + B^2 = (a-B)^2 - 2aB(B-a) = 13\sqrt{13} - 9\sqrt{13} = 4\sqrt{13}$

یکی از ریشه های مساوی ۲ است پس عبارت دیگری با بدون ریشه یا دارای ریشه مضاعف است

$n^2 - an + a = (n-2)^2 \Rightarrow a = 4$ دالت یک

حالت دو $a^2 - 4a < 0 \Rightarrow a(a-4) \Rightarrow \frac{0}{+1} \frac{4}{-1} + (0, 4)$

$\{4\} \cup (0, 4) = (0, 4]$

$2a^2 + B^2 - 4a = 7 \Rightarrow (a+B)^2 - 2aB = 4a + a^2 = 7$

$4^2 + \frac{2a}{3} + \frac{a}{3} = 7$ $\alpha(\alpha-4) = -\alpha-B$

$9 = -a \Rightarrow a = -9$

$3n^2 - 12n + 9 = 0 \Rightarrow n \rightarrow 1$ ریشه های ۱ و ۳ $\frac{-9}{3} = -3$

عرض نقاط برابری $\Rightarrow \frac{ra+r-(v-ra)}{r} + v-ra = b \Rightarrow b = 0$

$x_1 = \frac{-b}{ra} = 0 \Rightarrow b = -ba$ $y_5 = \frac{-\Delta}{ra} = \frac{rac-b^r}{ra} = r \Rightarrow$

$\frac{rac-b^r}{ra} = r \Rightarrow a = \frac{c-r}{r}$ $\left. \begin{matrix} v-ra \in \mathbb{N} \\ ra+r \in \mathbb{N} \\ a-r \in \mathbb{N} \end{matrix} \right\} \Rightarrow a = r \Rightarrow$

$(v-ra, a-r) \rightarrow y = an^r + bn + c \Rightarrow 1 = \frac{c-r}{r} + \frac{-ba+r}{r} + c \Rightarrow c = -\frac{1}{r}$

۶

$r_0(\beta^r + a^r + \beta - \beta) - 1v = 0 \Rightarrow r_0(S^r - rP + \beta(B-X)) - 1v = 0$

$r_0\left(1 + \frac{rb}{a} + \frac{b}{a}\right) - 1v = 0 \Rightarrow r_0 - 1v + \frac{r_0b}{a} = 0 \Rightarrow \frac{b}{a} = \frac{-1}{r_0} \Rightarrow$

۷

$a = -r_0b$ $0 = -r_0b^2 + r_0bn - b^r \Rightarrow 0 = r_0n^r - r_0n + 1$

$\frac{\sqrt{\Delta}}{|a|} = \frac{\sqrt{r_0n-1}}{r_0} = \frac{\sqrt{r_0}}{r_0} = \frac{1\sqrt{0}}{r_0} = \frac{r\sqrt{0}}{0}$

$x_5 = \frac{1+(-1)}{r} = -\frac{1}{r}$ $-\frac{1}{r} = ra - rb + \frac{r}{r} \Rightarrow b = ra + 1$

$\frac{-b}{ra} = r \Rightarrow ra = +b \Rightarrow ra = ra + 1 \Rightarrow a = \frac{1}{r}$

۸

$b = r \xrightarrow{(1, \beta)} \beta = \frac{1}{r} + 1 + \frac{r}{r} = \boxed{r}$

$r(S^r - rP) + \alpha^r = 12\sqrt{r} + 10 \Rightarrow \alpha = 12 + 10 + ra$

$r^r - ra$ $\alpha = \frac{-b - \sqrt{\Delta}}{ra} = \frac{-9 - \sqrt{r^2 - ra}}{r} = -r - \sqrt{9-a}$

$\sqrt{r-ra} + (9+9-a+9\sqrt{9-a}) = 12\sqrt{r} + 10$

$9_0 - 0a + 9\sqrt{9-a} = 12\sqrt{r} + 10 \Rightarrow \boxed{a=1}$

۹

$\frac{1}{\sqrt{a}} + \frac{1}{\sqrt{b}} = 0 \Rightarrow \frac{\sqrt{a} + \sqrt{b}}{\sqrt{ab}} = 0 \Rightarrow \frac{a+b+r\sqrt{ab}}{ab} = r_0$

$r_0 = \frac{\frac{m+1}{r^2} + \frac{1}{r}}{\frac{1}{r^2}} \Rightarrow r_0 = m + r^2 \Rightarrow m = -1$

۱۰

$y = -x^r + rx + r$ $b = c = \frac{c}{a} = \boxed{-r}$
