$$(1) \quad f(n) = \begin{cases} a + \sqrt[n]{n}, & n < 1 \\ b \sqrt[n]{n}, & n \geq 1 \end{cases}$$

$$* \quad a + 1 = b \rightarrow a - b = -1 \quad \leftarrow (1) \text{ می شود}$$

مقادیر عددی از n به n می آید. $n=1$ را می بینیم. $n=1$ را می بینیم.

$$f(1) \rightarrow a + \frac{1}{\sqrt[n]{n}} = a + \frac{1}{\sqrt[n]{1}} \times b$$

$$\frac{1}{1} = \frac{1}{1} \times b \rightarrow b = \frac{1}{1} \times \frac{1}{1} = 1 \rightarrow a - \frac{1}{1} = -1$$

$$a = -1 + 1 = 0$$

$$\rightarrow a + b = -1 + 1 = 0 \quad \boxed{\frac{1}{1}}$$

$$f'(1) = ?$$

$$g(n) = \frac{\sqrt[n]{n} - \sqrt[n]{n-1} + \sqrt[n]{n}}{\sqrt[n]{n}}$$

$$f(n) = \frac{1}{\sqrt[n]{n}}$$

$$= \frac{\sqrt[n]{n} - \sqrt[n]{n-1} + \sqrt[n]{n}}{\sqrt[n]{n}} + \frac{1}{\sqrt[n]{n}}$$

$$\frac{\sqrt[n]{n} - \sqrt[n]{n-1} + \sqrt[n]{n}}{\sqrt[n]{n}} = \frac{\sqrt[n]{n} - \sqrt[n]{n-1} + \sqrt[n]{n}}{\sqrt[n]{n}} = \frac{2\sqrt[n]{n} - \sqrt[n]{n-1}}{\sqrt[n]{n}}$$

$$\frac{2\sqrt[n]{n} - \sqrt[n]{n-1}}{\sqrt[n]{n}} = \frac{2\sqrt[n]{n}}{\sqrt[n]{n}} - \frac{\sqrt[n]{n-1}}{\sqrt[n]{n}} = 2 - \frac{\sqrt[n]{n-1}}{\sqrt[n]{n}}$$

$$(\sqrt[n]{n})$$

$$\frac{\sqrt[n]{n} - \sqrt[n]{n-1}}{\sqrt[n]{n}} = \frac{\sqrt[n]{n} - \sqrt[n]{n-1}}{\sqrt[n]{n}}$$

$$\begin{cases} b+c & ; x < a \\ \frac{1}{x} & ; x \geq a \end{cases} \rightarrow R \text{ مستطیل}$$

$$acc? \rightarrow \max_{x \in \mathbb{R}} = ab + c \leq \frac{1}{a}$$

$$b+c \leq \frac{1}{a} \rightarrow b \leq \frac{1}{a} - c \rightarrow b \leq \frac{1}{a} - \frac{1}{a} \rightarrow a \leq b$$

$$acc? \rightarrow \frac{a^2 b + a c}{-1} \rightarrow \boxed{acc?}$$

$$\begin{cases} b & ; x < a \\ b + (x-a)^m & ; x \geq a \end{cases} \quad (m \geq 1) \quad m=? \quad (R)$$

نشان دهیم که این تابع در $x=a$ پیوسته است و مشتق در $x=a$ نیز دارد.

$$b \neq 0 + m(n-a)^{m-1} \times 1$$

$$m \neq 0 \rightarrow \text{نیست مشتق}$$

$$f(x) = \frac{1}{\sqrt[n]{x - |x|}} \quad g(x) = \frac{1}{x^n - |x|^n} \quad (a)$$

$$g'(-\sqrt[n]{r}) \cdot f'(g(-\sqrt[n]{r})) = ?$$

$$\hookrightarrow (f \circ g)'(-\sqrt[n]{r}) = ?$$

$$f(g(x)) = \frac{1}{\sqrt[n]{x^n - |x|^n - |x^n - |x|^n|}} = \frac{1}{x^n \sqrt[n]{r}}$$

$x^n + x^n + x^n + x^n = 4x^n$

$$\frac{1}{x^n \sqrt[n]{r}} \times \frac{1}{x} = \frac{1}{x^{n+1} \sqrt[n]{r}} = \frac{-1}{x^{n+1} \sqrt[n]{r}} = \boxed{\frac{-1}{x^{n+1} \sqrt[n]{r}}}$$

$$y = ax + d \rightarrow f'(x) = f(x) = y \quad \frac{f(x)}{f'(x)} = ? \quad (b)$$

$$y = \underbrace{ax + d}_{f'(x)} \rightarrow f'(x) = f(x) = y$$

$$\downarrow$$

$$-a - (-ra - d) = y$$

$$f(x) = -ra - d \rightarrow -a + ra + d = y \rightarrow ra + d = y + a \rightarrow$$

$$\rightarrow \frac{f(x)}{f'(x)} = \frac{-ra - d}{-a - (-ra - d)} = \frac{ra + d}{ra + d} = \frac{-1}{r} \quad a = \frac{r}{r}$$

$$\rightarrow \boxed{\frac{-1}{r}}$$

← MW (9)

$$\frac{\frac{-1.0 + \sqrt{d}}{1c}}{\omega} = \frac{\frac{-\sqrt{d}}{1c}}{\omega} = \boxed{\frac{-\sqrt{d}}{1c}}$$
