تابعی اکبراصدی $\Rightarrow x-2 + \sqrt{x-4}$

از آنجایی که تابع $\Rightarrow$ قدرش مثبت $y=x$ یعنی شلوغ کردن اکبراصدی (دو خط) x و از روش راجع می گذریم می توانیم x جای فارول تابع و خود تابع را ساده کنیم

$\Rightarrow x-2+\sqrt{x-4} = x \Rightarrow x-4 = 4$
 $x=8 \quad y=8$
