فیلد ۱

سوال ۱

$$1 - \frac{a}{n} \rightarrow \frac{f(n) - f(a)}{n - a} \rightarrow \frac{1 - \frac{a}{n} - 1 + a}{n - a} \rightarrow \frac{+\frac{a}{n} - a}{n - a} \rightarrow \frac{+\frac{a}{n} - a}{n - a}$$

$$1 - an^{-1} \rightarrow f^{-1}(n) = an^{-r} \rightarrow \frac{a}{n^r}$$

$$\frac{a}{n^r} = \frac{a}{n^2} \rightarrow n = \sqrt{3}$$

$x = -\sqrt{3}$ در بازه $[3, 4]$ قرار ندارد
 پس $x = \sqrt{3}$ تنها جواب میکل است!

$$ran^r - an + 11a = n \rightarrow ran^2 - 4n + 11a = \dots$$

$$r^2 - r(2a) + 11a = n \rightarrow r^2 - 12a = n \rightarrow r^2 = 12a \rightarrow a = \frac{r^2}{12}$$

$$ran - a = 1 \rightarrow an = \frac{r}{a} \rightarrow r = \frac{r}{\frac{r^2}{12}} \rightarrow n = 3$$

$$\left| \begin{array}{c} r \\ r \end{array} \right| \rightarrow r \left(\frac{1}{r} \right) a - 10 + a \rightarrow 11 - 10a = 3 \rightarrow a = \frac{1}{r}$$

$$a = -\frac{1}{r}$$

اگر $a = \frac{1}{r}$ باشد، ریشه‌ی عبارت مثبت می شود و در نتیجه از تعریف مجموع میفرماند پس $a = -\frac{1}{r}$

$$y = n^3 - 12n + r \rightarrow y' = 3n^2 - 12 = 0 \rightarrow 3n^2 - 12 = 0$$

n	-2	2
y'	+	-
y	↗	↘

$$\min \rightarrow \left| \begin{array}{c} r \\ -12 \end{array} \right|$$

$$y' \rightarrow 3n^2 + 2an - 12 \xrightarrow{|:r} 3n^2 + 2an - 12 = 0 \rightarrow b = 0$$

$$f = n^3 + 2an^2 - 12n \xrightarrow{|:r} 12 - 2a = 0 \rightarrow a = 3$$

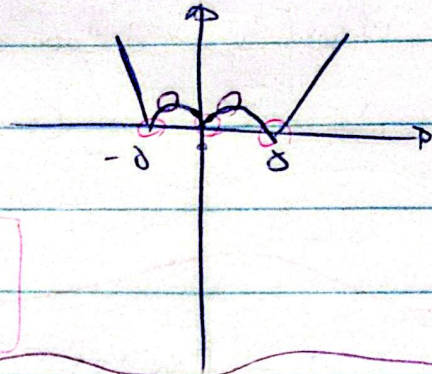

$$f = \left| \begin{array}{c} - \\ -2 \end{array} \right| \rightarrow \left| \begin{array}{c} - \\ -2 \end{array} \right| \rightarrow \sqrt{(-1 - (-2))^2 + (-2 - (-1))^2} = \sqrt{1 + 1} = \sqrt{2}$$

$$\sqrt[r]{\left(\frac{ra}{a}\right)^r} \left(\frac{ra}{a}\right) = \frac{r}{r} \rightarrow \sqrt[r]{\left(\frac{ra}{a}\right)^r} a = \frac{a}{r} \rightarrow \frac{ra^r}{r a} \times a^r = \frac{ra^r}{r}$$
