۱۰. $\lim_{n \rightarrow \infty} \frac{f(n) - a_n}{n} = 0 \Rightarrow b = 0$

21 Oct. 2024
1177 رجب الثانی ۱۴۴۶

$f'(n) = \sqrt{x} \cos^2(\sqrt{x}) + (-\sin^2(\sqrt{x})) + \sqrt{x} \sin$

$\lim_{n \rightarrow \infty} \frac{f'(n) - f'(0)}{n} \rightarrow f''(0) = 2$

$a + b = 1$

$1 = a$

$f'(n) \cdot f'(n) = 1 \rightarrow \sqrt{x} - \sqrt{x} = 1 \rightarrow n = \pm \frac{1}{\sqrt{x}}$

$f(n) = n^2 - 1 \rightarrow f'(n) = 2n \rightarrow f(n) \rightarrow \frac{1}{\sqrt{x}} - 1 = -\frac{\sqrt{x}}{\sqrt{x}}$

$m = \frac{y - a^2}{2a - a^2} = y \Rightarrow y - y = y(m - 2/a) \Rightarrow y = ym - y$

$f'(0) = \frac{-\sqrt{x}}{\sqrt{x} + 1} = -\frac{1}{\sqrt{x}}$

$y' = \frac{1 \cdot (n+1) - a(n+1)}{(n+1)^2} = \frac{a+1 - a - a^2}{(n+1)^2} = \frac{1 - a^2}{(n+1)^2}$

$y'(1) = 1 - a^2 \Rightarrow a = -1$

$f(n) = g(n) \rightarrow \sin n + \frac{1}{\sqrt{x}} \cos n = \frac{\sqrt{x}}{\sqrt{x}} \sin n \rightarrow \frac{1}{\sqrt{x}} \sin n + \frac{1}{\sqrt{x}} \cos n$

$f'(n) = \cos n - \frac{1}{\sqrt{x}} \sin n$

$y - \frac{\sqrt{x}}{\sqrt{x}} = \frac{\sqrt{x}}{\sqrt{x}} (n - \frac{\pi}{\sqrt{x}}) \Rightarrow n = \frac{\pi}{\sqrt{x}}$

$$f'(m) = 4m^2 - 4m - 12 = 0 \rightarrow m = 1$$

$$\rightarrow m = 2$$
