

$$f(x) = x + \sqrt{x} - 2 \xrightarrow{\sqrt{x}=a} f(x) = a^2 + a - 2 \quad a \geq 0$$

فهم

-1

في $[0, +\infty)$ نلاحظ ان $\sqrt{x}$ هي دالة متزايدة في $[0, +\infty)$ و x هي دالة متزايدة في $[0, +\infty)$
 لذلك $f(x)$ دالة متزايدة في $[0, +\infty)$

$$f(x) \text{ متزايدة } \rightarrow f(x) \leq f(4) \rightarrow \sqrt{x} \geq f(x) \rightarrow \sqrt{x} \geq x + \sqrt{x} - 2 \rightarrow x - 2 \leq 0 \rightarrow \boxed{x \leq 2} \quad (1)$$

$$\rightarrow D = [0, +\infty) \quad (2) \quad (1) \cap (2) \rightarrow \boxed{x = 0, 1, 2} \quad \subset \mathbb{R}$$

$$f(x) = \sqrt[3]{4\cos^2 x} - \sqrt[3]{1-4\cos^2 x} \rightarrow 4\cos^2 x = a$$

-4

$$0 \leq \cos^2 x \leq 1 \rightarrow 0 \leq 4\cos^2 x \leq 4 \rightarrow -1 \leq \sqrt[3]{4\cos^2 x} \leq 1$$

$$\Rightarrow f(x) = \sqrt[3]{a} - \sqrt[3]{-a}, \quad D = [-1, 1]$$

$$f(x) = \sqrt[3]{a} - \sqrt[3]{-a} = \sqrt[3]{a} - \sqrt[3]{-a} = \sqrt[3]{a} - \sqrt[3]{-a} \quad \left\{ \begin{array}{l} R_f = \left[-\frac{\sqrt[3]{12}}{3}, \frac{\sqrt[3]{12}}{3} \right] \\ b-a = \frac{\sqrt[3]{12}}{3} \end{array} \right.$$

$$f(x) = x - [a\sqrt{x}] = x - \frac{[a\sqrt{x}]}{a} \rightarrow \dots \rightarrow x \leq a - 2 < 1 \rightarrow \boxed{x \leq f(x) < 1}$$

-6

$$g(x) = \frac{x^a - x^{-a}}{x} \xrightarrow{f(x)=a} g \circ f(x) = \frac{x^a - x^{-a}}{x} \quad ? -x \leq a < 1$$

$$xg(1) = \frac{1 - \frac{1}{1}}{1} = \frac{0}{1} \rightarrow \boxed{g(1) = \frac{0}{1}}$$

$$xg(-1) = \frac{\frac{1}{1} - 1}{-1} = \frac{0}{-1} \rightarrow \boxed{g(-1) = \frac{0}{-1}}$$

$$R_{g \circ f} = \left[-\frac{\sqrt[3]{12}}{14}, \frac{\sqrt[3]{12}}{14} \right]$$

نلاحظ
