

$$\frac{\sin \alpha + \sqrt{r} \cos \alpha}{1 + \sqrt{r} \sin \alpha} = \frac{\sqrt{r} \cos \alpha + \varepsilon \sin \alpha}{1 + \varepsilon \sin \alpha} = \frac{\sin \alpha + \sqrt{r} - \varepsilon \sin \alpha}{\sqrt{r} - \sin \alpha} = \frac{\cos \alpha + \sqrt{r} - \sqrt{r} \cos \alpha}{\sqrt{r} - \cos \alpha}$$

$$= \frac{(\sqrt{r} - \sin \alpha) \sqrt{r}}{\sqrt{r} - \sin \alpha} - \frac{(\sqrt{r} - \cos \alpha) \sqrt{r}}{\sqrt{r} - \cos \alpha} = \sqrt{r} - \sin \alpha - \sqrt{r} + \cos \alpha = \cos \alpha - \sin \alpha = \sqrt{2} \cos \alpha$$

$\tan \alpha = \frac{\varepsilon}{\sqrt{r}}$ $\alpha \rightarrow \odot$  $\cos \alpha = \frac{\sqrt{r}}{r}$ $\sin \alpha = \frac{\varepsilon}{r}$ $\cot \alpha = \frac{\sqrt{r}}{\varepsilon}$

$$\sin\left(\frac{90^\circ}{\varepsilon} + \alpha\right) \cos\left(\frac{\sqrt{r}}{\varepsilon} - \alpha\right) - \tan\left(-\frac{\sqrt{r}}{\varepsilon} + \alpha\right) = (\cos \alpha)(-\sin \alpha) - (-\cot \alpha) =$$

$$= -(\cos \alpha)(\sin \alpha) + (\cot \alpha) = -\left(\frac{\sqrt{r}}{r}\right)\left(\frac{\varepsilon}{r}\right) + \frac{\sqrt{r}}{\varepsilon} = \frac{-\sqrt{r}\varepsilon}{r^2} + \frac{\sqrt{r}}{\varepsilon} = \frac{-\sqrt{r}\varepsilon + r^2}{r^2\varepsilon} = \frac{r^2 - \sqrt{r}\varepsilon}{r^2\varepsilon}$$

$(\sqrt{r} \cos \alpha + \sqrt{r} \sin \alpha - \sqrt{r} \cos \alpha)$ $\frac{\sqrt{r} \cos(\frac{\pi}{2}) + \sqrt{r}(\sin \alpha - \cos \alpha)}{\sqrt{r} \sin(\alpha - \frac{\pi}{2})}$

$\alpha = \frac{\pi}{4}$

$$= \frac{\sqrt{r}}{\varepsilon} + \sqrt{r} \sin\left(\frac{\pi}{4} - \frac{\pi}{4}\right) = \frac{\sqrt{r}}{\varepsilon} - \sqrt{r} \sin \frac{\pi}{4} = \frac{\sqrt{r}}{\varepsilon} - 1 = \frac{1}{\varepsilon}$$

$\tan\left(\frac{\alpha}{2}\right) = \frac{1}{\varepsilon} \rightarrow \tan \alpha = \frac{\sqrt{r} \tan \frac{\alpha}{2}}{1 - \tan^2 \frac{\alpha}{2}} = \frac{\frac{1}{\varepsilon}}{1 - \frac{1}{14}} = \frac{1}{\frac{10}{14}} = \frac{14}{10}$

چون $\tan \alpha = \frac{14}{10}$ سے $\tan \frac{\alpha}{2}$ کی قیمت $\frac{1}{\varepsilon}$ سے ملے گی

$\sin \alpha = \frac{14}{17}$
 $\cos \alpha = \frac{10}{17}$

$$\frac{\tan \alpha - \sin \alpha}{\sin \alpha - \cos \alpha} = \frac{\frac{14}{10} - \frac{14}{17}}{\frac{14}{17} - \frac{10}{17}} = \frac{\frac{14 \times 17 - 14 \times 10}{170}}{\frac{-4}{17}} = \frac{14}{-4} = \frac{-14}{4} = \frac{-7}{2}$$

$$\frac{\cos \alpha}{\sin \alpha} \rightarrow \frac{\cos \alpha}{\sin \alpha} \rightarrow \sqrt{\cos \alpha}$$
