$$f(x) = mx^2 - \omega x + m \quad \frac{x_1 \quad x_2}{-q + q -}$$

ی فهمیم که  $m$  منفی است و معادله هم ۲ ریشه دارد. (چون قبل ریشه اول و بعد ریشه دوم)  
موافق علامت  $m$  است.

①  $m < 0$

②  $\Delta > 0 \rightarrow 2\Delta - 4m^2 > 0 \rightarrow m^2 < \frac{2\Delta}{4} \rightarrow m < \frac{\Delta}{2} \wedge m > -\frac{\Delta}{2}$

① و ②  $m = (-\frac{\Delta}{2}, 0)$
