

۲۵ عالی نوشتن!

نقطه ها:

$$\begin{vmatrix} \frac{4+2}{2} \\ \frac{1-2}{2} \end{vmatrix} \rightarrow (2, 1)$$

شیب AB: $\frac{1-4}{-2} = -\frac{3}{2} \rightarrow \frac{1}{\frac{3}{2}}$

$$\Rightarrow (y-1) = \frac{1}{\frac{3}{2}}(x-2)$$

$$\boxed{3y - x - 5 = 0} \checkmark$$

BC: $\sqrt{x^2 + y^2} = \sqrt{9+16} = 5 \checkmark$

AH: معادله BC: $(y-1) = -\frac{3}{2}(x+1) \Rightarrow 3y + 4x - 8 = 0$

$5 - 2 = 3 \checkmark$

AH $\rightarrow \frac{|3(1) + 4(2) - 8|}{\sqrt{9+16}} = 1 \checkmark$

مقدارها:

$$2y - x = 7$$

$$4y - ax = 2$$

$$\frac{2}{4} = \frac{-1}{-a} \Rightarrow a = 2$$

معادله

① $4y - 2x = 2$

② $4y - 2x = 14$

$$\boxed{\frac{|14-2|}{\sqrt{16+4}}}$$

$$\rightarrow r = \frac{12}{\sqrt{8}} = \frac{3\sqrt{8}}{2}$$

$$\boxed{S = \frac{9}{8}\pi} \checkmark$$

AB و M $\Rightarrow \begin{vmatrix} \frac{4+2}{2} \\ \frac{1-2}{2} \end{vmatrix} \gg (2, 1)$

شیب AB $\rightarrow$ شیب معادله $(y-1) = -(x-2) \Rightarrow y = -x+3$

معادله AH: $y = x-2$

H: $(\frac{1}{2}, \frac{3}{2}) \Rightarrow MH: \sqrt{(\frac{1}{2})^2 + (\frac{1}{2})^2} = \sqrt{\frac{1}{2}} = \frac{1}{\sqrt{2}} = \frac{\sqrt{2}}{2} \checkmark$

مقدار

$$\frac{m+1}{2m-4} \times \frac{2m-2}{m-5} = -1 \Rightarrow 2m^2 + m - 2 = -2m^2 + 14m - 10$$

$$\Rightarrow 4m^2 - 13m + 8 = 0$$

معادله $\Delta < 0$ پس مقدار m ممکن نیست

باصطوری قرار دلائل

$$\left\{ \begin{array}{l} A|1 \\ B|0 \\ C|\frac{8}{3} \end{array} \right\} \Rightarrow \text{مقدار } m \left| \begin{array}{l} \frac{1}{3} \\ \frac{2}{3} \end{array} \right. \Rightarrow AM = \sqrt{\frac{1}{9} + \frac{4}{9}} = \frac{5\sqrt{2}}{3}$$

$$AC = |A - C| = |1 - \frac{8}{3}| = \frac{5}{3} = \frac{1 \cdot 1 + (-8) \cdot 1}{\sqrt{1^2 + 1^2}} = \frac{1 + (-8)}{\sqrt{2}} = \frac{-7}{\sqrt{2}} = \frac{7}{\sqrt{2}}$$

✓

معادله خط

$$2y + x - 2b = 0 \Rightarrow \sqrt{20} = \frac{|12(0) + (-1) - 2b|}{\sqrt{1^2 + 2^2}} \Rightarrow 2\sqrt{5} = \frac{|-2b|}{\sqrt{5}}$$

$$10 = |2b| \quad b = \pm 5$$

میشود

$$y = -\frac{1}{2}x + 5 \quad \left\{ \begin{array}{l} A \quad 0 = -\frac{1}{2}x + 5 \rightarrow 1|0 \\ B \quad y = 0 + 5 \rightarrow 1|5 \end{array} \right. \Rightarrow \sqrt{1^2 + 2^2} = \sqrt{5}$$

✓

یکی از خطها $y=0$ و معادله دو خط را داریم.

عرض از مبدأ دو خط برابر و مساوی $\frac{c}{a}$

$$my = c(0) = 2m \quad y = 2$$

$$y + m(0) = (0) + 2 \quad y = 2$$

مسافت

$$\frac{b}{2} = \frac{1}{2} \left| \frac{2}{m-1} + \frac{m}{2} \right| \times 2$$

یکی از فرضها

$$\frac{m^2 - m + 4}{2(m-1)} = \frac{b}{2}$$

و $m = 3$

مسافت

$$h = 2$$

و قطع مقابل محور x میسر $(0, 2)$

مسافت

$$\frac{2}{m-1} + \frac{m}{2} = \frac{b}{2}$$

مسافت

$$\frac{2}{m-1} + \frac{m}{2} = \frac{b}{2}$$

مسافت

$$\frac{2}{m-1} + \frac{m}{2} = \frac{b}{2}$$

نقطه که نقطه را

بداً می کشیم

خط!!

مثلاً $P|0$

$$\frac{y}{m} = \frac{m_p + m_p'}{2} \Rightarrow m' = 4$$

$$\frac{y}{-2} = \frac{y_p + y_p'}{2} \Rightarrow y' = -1$$

$P'(4, -1)$

$$(y+1) = 2(x-4) \Rightarrow y = 2x - 9$$

✓

$m = 1 \Rightarrow -1$

محور

نقطه $(1, 2)$ نسبت به $(-1, 4)$

$(-3, 4) = (a, b)$

$$y - 2 = -1(x - 1) \Rightarrow y = -x + 3$$

$$-x + 3 = x + 8 \Rightarrow x = -1$$

$$y = 4$$
