

$S(ABC) = \frac{1}{2} AB \times AC \times \sin A \times \frac{1}{r}$   
 $S(ADE) = \frac{1}{2} AD \times AE \times \sin A \times \frac{1}{r}$   
 $\Rightarrow \frac{AB \times AC \times \sin A}{r} = \frac{AD \times AE \times \sin A}{r} \Rightarrow \frac{AB \times AC}{AD \times AE} = 1$   
 $\Rightarrow \frac{AB}{AD} = \frac{AE}{AC} = \frac{r}{R} \Rightarrow \sin A = \frac{r}{R}$

$\sin A = \frac{1}{r} \Rightarrow \cos A = \frac{\sqrt{r}}{r} \Rightarrow \tan A = \frac{1}{\sqrt{r}} = \frac{\sqrt{r}}{r}$

$\frac{1}{|\cos \alpha|} \times \frac{\sin \alpha}{\cos \alpha} = \frac{1 + \sin \alpha}{|\cos \alpha|} \Rightarrow \frac{\sin \alpha}{\cos \alpha} = \frac{-\sin \alpha}{|\cos \alpha|} \Rightarrow \cos \alpha = -\cos \alpha \Rightarrow$   
 $\cos \alpha = 0$

$\frac{|\sin \alpha|}{\cos \alpha} = \frac{-\sin \alpha}{\cos \alpha} \Rightarrow \sin \alpha = 0$

$\frac{r \sin \lambda - \lambda \sin r}{-\sin \lambda r - \lambda \sin r} = \frac{-\lambda \sin \lambda r}{-\lambda \sin \lambda r} = \frac{\lambda}{r}$   
 $\frac{r \cos(\frac{\lambda}{r} - \lambda) - \lambda \sin(\lambda - r)}{\sin(\lambda + r) - \cos(\frac{\lambda}{r} + r)}$

$$\sin \alpha \neq \cos \alpha$$

$$(\sin \alpha) \Rightarrow \cos \alpha$$
