کیا یہ صحیح ہے \*

①  $\cot \alpha = \frac{\cos \alpha}{|\sin \alpha|} \rightarrow$   $\Rightarrow$   $\cot \alpha$ ،  $\cos \alpha$  کے لیے  
 علامت  $\oplus$   $\Rightarrow$   $\cot \alpha > 0 \Rightarrow \cos \alpha > 0$

$\frac{1}{|\cos \alpha|} - \frac{\sin \alpha}{\cos \alpha} = \frac{1 - \sin \alpha}{|\cos \alpha|}$

$\cos \alpha > 0 \Rightarrow \frac{1}{\cos \alpha} - \frac{\sin \alpha}{\cos \alpha} = \frac{1 - \sin \alpha}{\cos \alpha}$   
 $\cos \alpha < 0 \Rightarrow \frac{-1}{\cos \alpha} - \frac{\sin \alpha}{\cos \alpha} = \frac{1 - \sin \alpha}{\cos \alpha}$

$\Rightarrow \cos \alpha > 0 \Rightarrow \cot \alpha > 0 \Rightarrow \sin \alpha > 0$   
 $\Rightarrow$  دو تہی اول اسٹ

②  $-\frac{r}{1r} < x < \frac{\Delta r}{1r} \Rightarrow -\frac{r}{r} < x < \frac{\Delta r}{r}$

$-\frac{1}{r} < \sin x < 1 \Rightarrow -\frac{1}{r} < \frac{m-1}{r} < 1 \Rightarrow -1 < m < \Delta$

③  $\tan x + \cot x = \frac{r}{\sin x} = -r \Rightarrow \frac{\sin x}{r} = \frac{-1}{r}$

$\sin^r x + \cos^r x = (\sin x + \cos x) \cdot \frac{(\sin^r x + \cos^r x - \sin x \cos x)}{\sin x}$

$= \frac{\sqrt{1 + \sin 2x}}{r} \cdot \frac{1 - (-\frac{1}{r})}{r} = \frac{r}{r}$

$\Rightarrow \frac{\sqrt{f}}{f} = \frac{\sqrt{f}}{f}$

$(\sin u + \cos u)^2 = 1 + 2\sin u \cos u$   
 $= 1 + 2\left(\frac{-1}{\sqrt{f}}\right) = \frac{1}{\sqrt{f}}$

$\frac{\pi}{2} < u < \pi \rightarrow \frac{\pi}{2} < u < \pi \rightarrow \sin u + \cos u < 0 \rightarrow \frac{-\sqrt{f}}{\sqrt{f}}$

(5)

$\sin^2 u + \cos^2 u = -\frac{\sqrt{f}}{\sqrt{f}} \left(\frac{f}{f}\right) \rightarrow \frac{1}{\sin^2 u + \cos^2 u} = \frac{-\sqrt{f}}{f}$

$\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$

$\frac{1}{2} \times 0.707 = 0.354$

$\frac{(1/4 + 0.354)}{2} = 0.427$

! بله من

(6)  $\tan\left(10 + \frac{\pi}{4}\right) \tan\left(10 - \frac{\pi}{4}\right) - \sin\left(10\right) \cos\left(\frac{\pi}{4} - 10\right)$

(1/2)

$- \cot(10) \tan(10) + \sin(10) \sin(10) = -1 + \sin^2(10) = -\cos^2(10)$

$\frac{1 + \sin^2(10)}{\cos^2(10)} = \frac{1 + \sqrt{5} - \sqrt{5}}{\sqrt{5} + \sqrt{5}} = k$

$k = -1$

(7)  $\sqrt{3} \cos\left(\frac{\pi}{4} + \pi\right) \sin\left(\frac{\pi}{4} - \pi\right) - \sqrt{2} \sin\left(\frac{\pi}{4} + \frac{\pi}{4}\right) \cos(\pi - \pi)$

$\sqrt{3} \cos\left(\frac{\pi}{4}\right) \sin(\pi) + \sqrt{2} \cos\left(\frac{\pi}{4}\right) \cos(\pi)$

(2)

$\Rightarrow \sqrt{3} \cdot \frac{\sqrt{2}}{2} \cdot \cos \pi + \sqrt{2} \cdot \frac{\sqrt{2}}{2} \cdot \cos \pi = \cos \pi \left(\frac{\sqrt{6}}{2} + 1\right)$

$\Rightarrow (\cos \pi) \left(\frac{5}{2}\right) \Rightarrow \frac{5}{2}$

(8)  $\frac{\pi}{4} \Rightarrow \cos^2\left(\frac{\pi}{4}\right) \cos^2\left(\frac{\pi}{4}\right) \cos^2\left(\frac{\pi}{4}\right) \cos^2\left(\frac{\pi}{4}\right)$

$2 \cos^2\left(\frac{\pi}{4}\right) = 1 + \cos\left(\frac{\pi}{2}\right) = 1 + \frac{\sqrt{2}}{2} = \frac{2 + \sqrt{2}}{2}$

(2)

$\Rightarrow \left(\frac{2 + \sqrt{2}}{2}\right) \left(\frac{2 + \sqrt{2}}{2}\right) \left(\frac{1}{2}\right) \left(\frac{1}{2}\right) = \frac{4 + 2\sqrt{2}}{4}$
