

$$a^r - mn + r = 0 \Rightarrow P = \alpha \cdot \beta = r \Rightarrow S = m = \alpha + \beta$$

(2)

$$\alpha \cdot \beta^r = r \Rightarrow \alpha \cdot \beta \cdot \beta = r \Rightarrow P \cdot \beta = r \Rightarrow r\beta = r \Rightarrow \beta = \frac{r}{r}$$

$$\Rightarrow \alpha \cdot \frac{r}{r} = r \Rightarrow \alpha = \frac{r}{r} \Rightarrow S = \alpha + \beta = \frac{r}{r} + \frac{r}{r} = \frac{r+r}{r} = \frac{r \cdot 2}{r} = 2 = m$$

$$a^r - r + m = 0 \Rightarrow S = r, P = m$$

روش اول: $r\alpha + \alpha \Rightarrow S = r\alpha + \alpha = r\alpha = r \Rightarrow \alpha = 1 \Rightarrow r\alpha = r$

$$P = r\alpha \cdot \alpha = r\alpha^r \Rightarrow r(1) = r = m$$

(2)

$$a^r - va + r = 0 \Rightarrow P = \alpha \cdot \beta = r \Rightarrow \beta = \frac{r}{\alpha} \Rightarrow \beta^r = \frac{r^r}{\alpha^r}$$

(2)

$$\Rightarrow \alpha^r + \frac{r^r}{\alpha^r} = \alpha^r + \beta^r = (\alpha + \beta)^r - r\alpha\beta(\alpha + \beta) = S^r - rPS$$

$$S = v, P = r \Rightarrow v^r - r(r)(v) = 3^r - r^2 = 3 \cdot 3^r - 4^2 = 3 \cdot 1$$

مساوی: $3 \cdot 1$

$$h(t) = -10t^2 + 50t$$

زمان (t) ارتفاع توپ (h)

$$\text{ارتفاع ماکسیمم توپ} = h_{\max} = \frac{-\Delta}{2a} = \frac{-(2500)}{-20} = \frac{2500}{20} = 125$$

قد!

(2)

زمانی که ارتفاع توپ صفر است $\Rightarrow -10t^2 + 50t = 0 \Rightarrow t(50 - 10t) = 0$

$$\Rightarrow \begin{cases} t=0 \\ t=5 \end{cases}$$

توپ در زمان 5 به زمین برخورد می کند.

$$(n-1)^r = r(n+1) \rightarrow a = \{0, 4\}$$

✓

$$a^r - r(n+1) = r(n+1) \Rightarrow a^r - r = 0 \Rightarrow a = \{0, 4\}$$

Arman

$$a^r + r(n+1) = r(n+1) \rightarrow a = \{-2, 1\}$$

✓

(2)

$$a^r + r(n+1) = r(n+1) \rightarrow a^r + a - r = 0$$

$$S \mid \frac{-r}{-1} = -1 \Rightarrow (n+2)(n-1) \rightarrow a = \{1, -2\}$$
